95% CI	0.067–1.515	0.510–2.008	0.646–2.352

Supplementary Fig. 1. Rates of steroid-free remission at weeks 6, 14, and 54 among biologic-naïve patients ($n = 112$) and biologic-non-naïve patients ($n = 74$) receiving VDZ therapy with concomitant steroids for ulcerative colitis. ORs were calculated for "steroid-free remission = yes", with P -values from a chi-square test. VDZ, vedolizumab; OR, odds ratio; CI, confidence interval.
